Glenshayne G. Belarmino

Del Carmen • Surigao Del Norte, Philippines • 8418 • glenshc@gmail.com • 09100663924

Summary

Backend-leaning developer with a focus on game systems, engine architecture, and low-level programming (C/C++/C#). Proven track record leading small teams to competition wins (2x 1st place, 1x 3rd place) while personally authoring the majority of each project's codebase. Self-taught across multiple languages and frameworks, with hands-on experience spanning game engines, real-time rendering, multithreaded systems, and full-stack development.

Education

CEBU INSTITUTE OF TECHNOLOGY - UNIVERSITY Cebu City, Cebu
BS Computer Science Expected 2028
Awards & Honors: Academic Achiever Award, Parangal 2025 & 2026; Honor Roll, 2025-2026; FlexhibIT 4.0
Relevant Coursework: Object-Oriented Programming, Data Structures & Algorithms, Automata Theory

Experience

Netfox C++ Port | Infinitus-adjacent Project
Personal **2026 (Ongoing)**

- Designing and building a native C++ port of Netfox, Godot's multiplayer authority addon, aimed at improving API ergonomics and developer usability over the original implementation
- Architecting the networking model around client-side prediction, server reconciliation, and entity interpolation, using Gabriel Gambetta's "Client-Server Game Architecture" as the conceptual foundation
- Extending prior open-source contributions to Netfox (NetfoxCs) into a full ground-up rewrite intended as the multiplayer backbone for Infinitus

Limitless | Infinitus **Cebu City**
Lead Game Developer 2026 (3rd Place)

- Conceived original game concept and directed design, architecture, and creative direction as lead designer and developer, earning **3rd place** at the DOST NEXT LEVEL: Esports Game Dev Challenge
- Authored **~90%** of the codebase using **C#** and **Godot** with **C++ GDExtension**, including all backend systems and core game logic, while building internal tools to accelerate team development workflow
- Contributed to **Netfox**, an open-source multiplayer authority addon for Godot, including work on **NetfoxCs** - a C# bridge built as an improved alternative to NetfoxSharp
- Delivered first 3D project experience, handling **VFX and UI** implementation alongside core systems programming
- Managed Git repository as sole owner of version control, handling **merging, rebasing, and conflict resolution** across the team
- Led and managed the development team, overseeing coordination and direction from concept to final delivery

Pool Party | InParallel, Apart Cebu City
Lead Game Developer 2026 (1st Place / Champion)

- Directed game architecture, design, and creative direction while authoring **~90%** of the codebase, leading the team to **1st place** at UP Game Jam 2026
- Reviewed and resolved bugs in AI-generated code from teammates, maintaining stability across the codebase
- Managed Git repository workflow, including **merging, rebasing, and conflict resolution** across multiple contributors
- Served as technical director, assigning tasks and guiding development while delegating team leadership logistics to another member

OnlyCodes | Capstone Project Cebu City
Team Lead & Lead Developer 2026

- Led a team of 5 in developing OnlyCodes, an offline code judge platform built as a bootleg alternative to CodeChum, for a school capstone requirement
- Designed and implemented multithreaded code judging system in JavaFX, enabling fast, concurrent code evaluation and execution
- Built core UI and majority of system architecture, serving as primary technical contributor while directing team coordination and task delegation
- Designed file-based problem-sharing system, representing each coding problem as a shareable file to simplify distribution and offline access

9Lives | Ame Cebu City
Game Developer (Contributor) 2025 (1st Place / Champion)

- Contributed development support for Ame, a story-based horror game built for Sugbuanon Saga: Game Jam 2025, earning **1st place**
- Assisted with coding tasks within a 2.5D game environment, supporting the team despite limited availability during development
- Delivered contributions under significant time constraints, including disruptions from natural disasters during the jam period

$-Family Gesture Recognition Port | Personal Project Cebu City
Independent Developer 2025

- Ported the $-family gesture recognition algorithms ($1, $N, $P, $P+, $Q) from their original implementations to C++ within Godot's GDExtension framework
- Implemented unistroke and multistroke gesture recognition logic as a reusable, native-performance module for integration into Godot projects

Adobo Engine | Personal Project Cebu City
Solo Developer 2025

- Designed and built Adobo Engine, a modular 2D/3D game engine written in C, from the ground up as a single-developer project
- Implemented OpenGL-based rendering with sprite batching, shaders, and texture support, alongside GLFW window/input management and GLAD-based OpenGL loading
- Built core engine systems including an Entity Component System (ECS), scene and asset management, and AABB/circle collision detection
- Developed a built-in editor using Dear ImGui integration, supporting cross-platform builds (Windows, Linux, macOS) via a CMake-based build system
- Integrated cglm for math operations, gaining hands-on experience in shader programming and real-time rendering pipelines

Zira POS | Independent Project Del Carmen, SDN
Freelance / Independent Developer 2024

- Designed and built Zira POS, a point-of-sale system for restaurant order management, as first-ever coding project, self-teaching Python and JavaScript from scratch
- Developed core POS functionality using React Native (Android), including menu item ordering, transaction history, and Bluetooth receipt printer integration
- Sold system to a local restaurant, delivering a functional commercial product despite being a first-time developer
- Encountered and learned from performance limitations in the initial implementation, gaining early hands-on experience in scalable app architecture

Skills & Interests

Technical: C#, C++, C, Java, Kotlin, Python, JavaScript, SQL, AutoHotkey (AHK), Lua | Godot Engine (GDExtension), XAMPP, Java Swing, JavaFX, Android Studio | Git version control | Multithreaded

programming | Strong foundational grasp of programming concepts, enabling rapid adoption of new languages and frameworks (e.g., achieved working fluency in C# within one day)

Language: English (Fluent), Filipino/Bisaya (Native)

Interests: Game development, software architecture, and systems programming; independent development of quality-of-life browser tools — including two private Firefox extensions (using the Gemini API) built by reverse-engineering existing websites to streamline academic workflows for personal and peer use
